# ABOUT US

Our extensive experience in the distribution and sale of LED lighting has inspired us to provide innovative solutions to our clients, which has reflected in the development of unique products – LED profiles. These aluminum profiles represent a key element in the application of LED strips, where their primary function is to efficiently dissipate the heat generated by the LED strips, thereby significantly extending their lifespan and contributing to the aesthetic and modern design of lighting installations.

LEDprofiles s.r.o. specializes in the manufacturing and wholesale distribution of LED profiles, leveraging a strategically located central warehouse in Slovakia, at the heart of Europe. This location enables us to guarantee fast delivery times and minimize transport costs for customers across the European Union.

Our goal is to build relationships based on trust and cooperation, to provide you with a stable and reliable partner with a rich portfolio of LED profiles and accessories suitable for a wide range of applications. Our vision is to become your preferred supplier for all your LED lighting needs, emphasizing innovation, quality, and customer satisfaction.

LP-SNAPFIT-C-BLK

LED profile **WALL-GLOW MAXI WHITE** is designed for strong yet refined indirect lighting that cleanly defines the perimeter of a space. This robust aluminum profile is intended for direct integration into drywall constructions, where it becomes a seamless architectural element after finishing. Once plastered and painted, it visually disappears, leaving only a continuous line of soft reflected light. **WALL-GLOW MAXI WHITE** creates glare-free illumination that enhances spatial proportions, adds depth, and elevates the overall atmosphere. Its solid construction ensures stability and precision, making it suitable for professional installations in modern residential and commercial interiors where lighting is meant to support the architecture rather than dominate it.

LED profile **DECO LINE** is an elegant solution for creating subtle indirect lighting that adds depth and visual lightness to an interior. It is designed so that the light appears natural and unobtrusive, without visible technical elements.

The profile is ideal for use as a curtain track profile, where it creates soft backlighting for curtains or drapes and highlights their texture and movement. The light gently flows over the fabrics, creating a pleasant atmosphere, especially in living rooms and bedrooms.

DECO LINE is also suitable for indirect wall lighting in any room. It helps shape the space, visually enlarges it, and emphasizes the architectural lines of the interior. It is mounted to the ceiling, where it blends discreetly with the structure and creates a clean, modern lighting effect.

LED profile **WALL ELEGANT** is designed for clean, architectural integration of indirect lighting directly into the wall. After mechanical fixing, the profile is reinforced with mesh and painted over, allowing it to visually disappear and become a seamless part of the interior. The light is glare-free and works with soft reflection, subtly shaping the space and adding depth and elegance. **WALL ELEGANT** enhances architectural lines without visible technical elements, making it an ideal solution for modern residential and commercial interiors where lighting supports the design rather than drawing attention to itself.

LED profile **RECESSED 15** is an aluminum profile designed for recessed wall installation, where the light becomes a natural part of the architecture. After secure mechanical fixing, the profile is reinforced with mesh and finished together with the wall surface, allowing it to visually disappear and form a clean, continuous line of light without visible edges or technical elements.

The profile is intended for indirect lighting that uses reflected light to subtly shape the space. It emphasizes volumes and architectural lines while creating a calm, refined lighting effect without glare, naturally complementing the overall interior design.

The **Corner 6 LED profile** is an aluminum corner profile made of anodized aluminum, allowing the LED strip light to be directed at a 30° or 60° angle. Thanks to this flexibility, it is ideal for lighting kitchen counters, furniture, walls, or ceilings. Installation can be done using mounting clips or adhesive, with five diffuser options available.
